*"Managed decentralized wastewater systems...merit serious consideration in any evaluation of wastewater management options for small and mid-sized communities and new development."*

*Environmental Protection Agency, Response to Congress, April 1997*

# Decentralized Wastewater – Working for Wilson County

## Friendly to the Environment:

- No Smell
- Works well with any terrain and in as little as six inches of topsoil
- Protects public health and the environment by preventing spills into our rivers and streams
- Promotes recycling of water for landscaping and for other uses
- Endorsed by the Environmental Protection Agency as “a permanent long-term solution” and a “goal of the Clean Water Action Plan” (CE News, March 2002)

## Low Maintenance:

- Special interceptor tanks promote an air tight system which decreases maintenance
- Filters can operate for many years before maintenance and repairs needed

## Encourages Smart Growth:

- Responds as growth occurs
- Helps provide homes for citizens without using our best farm land

## Suitable for Most Development:

- Suitable for residential, heavy and light industrial sites, business parks and schools
- Designs fit the needs and desires of homebuilder or developer

## How it Works:

- Developer or homebuilder contracts with Wilson On-Site Systems, LLC, regulated by Water and Wastewater Authority of Wilson County
- Water and Wastewater Authority of Wilson County provides maintenance and management
- Homeowners pay a flat monthly bill
